

## 1. VOA Summary Cover

## 2. VOA Summary Overview

The vSphere Optimization Assessment helps customers understand and gain value from vRealize Operations to improve and optimize their own Software Defined Datacenter (SDDC) built on VMware vSphere.

In these reports, you will learn how to visualize and improve the reliability, performance and efficiency of your SDDC. You can view these reports at any time for up-to-date information and you can use any of them independently to evaluate your SDDC and your efforts to implement recommendations.

This summary report provides an overview of:

- Capacity Optimization

- Performance Optimization

- Configuration Optimization

- Events Analysis
